N. Pooja Reddy

9010430250 | poojareddy2217@gmail.com | linkedin.com/in/poojareddy | github.com/poojareddy24817 | Hyderabad, Telangana

Education

Vignan Institute of Technology and Science — Telangana, India
Bachelor of Technology in Computer Science and Engineering; CGPA: 8.6/10 — *2023 – 2027*

Work Experience

SmartBridge – National Internship Program (ServiceNow Global Certification) — Remote
Intern – In Progress — *Aug 2026 – Present*

- Selected for the National Internship Program on the ServiceNow track; began with orientation on Aug 4, 2026.
- Engaged in instructor-led sessions and self-paced modules covering ServiceNow platform fundamentals, alongside a capstone project tracked via a Kanban workflow.
- Capstone project deliverables to be maintained on GitHub with a mentor-reviewed demo video.

GOJEK — Bengaluru, India
Software Engineering Intern — *Jan 2025 – Mar 2025*

- Worked on an internal Golang Slackbot for automating the onboarding process of new developers.
- Built a training portal for recruiters that performed automated hygiene checks on backend developer code submissions.
- Technologies used: Ruby, Express.js, Docker.

Projects

Multi-Tenant SaaS Platform
React, Node.js/Express, PostgreSQL, Sequelize, JWT, Docker

- Built a containerized, production-grade multi-tenant SaaS platform with a shared-database, tenant-id row-level isolation architecture, enforced via middleware-level tenant scoping across all service layers.
- Implemented role-based access control (Super Admin, Tenant Admin, Standard User) with JWT authentication and tenant-bound query enforcement; added Kanban-style task tracking and Free/Pro subscription plan enforcement, deployed via Docker Compose.

Payment Gateway System
Node.js/Express, PostgreSQL, React (Vite), Docker

- Developed a full-stack payment gateway emulating platforms like Razorpay/Stripe, enabling merchants to create payment orders via secure APIs and customers to pay through a hosted checkout page supporting UPI and Card methods.
- Implemented merchant authentication using API Key/Secret, order lifecycle management, and a payment state machine with a merchant dashboard; containerized with Docker Compose for single-command deployment.

Emotion-Aware Learning Difficulty Predictor
CNN, OpenCV, Python

- Trained a CNN on the FER-2013 dataset (7 emotion classes, 35,000 images) with OpenCV for real-time facial emotion recognition in adaptive learning analytics.

Technical Skills

Languages: Java, Python (Primary), C
Frontend / Backend: React, HTML, CSS, JavaScript, Node.js, Express.js
Infra & Tools: Docker, Docker Compose, REST APIs, Git, GitHub, n8n Automation
Databases: MongoDB, MySQL
CS Fundamentals: DSA, Operating Systems, Computer Networks, DBMS, OOP, Collections
Interests: System Design, Cloud Computing (AWS), Machine Learning

Certifications & Achievements

Certifications: ServiceNow Certified System Administrator (CSA), June 2026; ServiceNow Certified Application Developer (CAD), August 2026; Tableau; Python Programming; C Programming; DBMS
Achievements: LeetCode – 50+ DSA problems solved; HackerRank 5-Star badges in C, Python, Java, SQL; SIH 2024 Finalist
Workshops: DevOps (Git/GitHub, CI/CD, automation fundamentals); CSI AI Workshop (core AI concepts & model implementation)

Strengths & Interests

Strengths: Quick learner, strong problem-solving, adaptability, consistent high-quality delivery, ownership mindset
Interests: AI/automation projects, creative illustration, reading

Extra-Curricular Activities

- Served as **NSS Event Coordinator**, organizing and coordinating multiple college-level NSS (National Service Scheme) events.
- Participated in the **Student VHack Hackathon**, collaborating in a team environment to build and present a solution under time constraints.
